Practical no	Title	Sign
1	Create a Hello World bot using Message Box	
2	Automate a web login form	
3	Extract data from websites using Data Scraping	
4	Automate Excel operations: sorting, filtering, and reporting	
5	Read data from PDF invoices and generate summaries	
6	Handle exceptions using Try-Catch blocks	
7 A	Implement conditional workflows using Switch	
7 B	Implement conditional workflows using If	
8	Integrate OCR for image-to-text extraction	

Practical no 1

Aim: Create a Hello World bot using Message Box

Step: -

Step 1: Create a **New Process** in UiPath Studio.

Step 2: Add a **Message Box** activity to the workflow.

In the **Text** field, enter: "hello world"

Step 4: Run the workflow to display the message.

Output: -

Practical no 2:

Aim: Automate a web login form

Step: -

Step 1: Create New Process

Create a **New Process** in UiPath Studio.

Step 2: Add Use Application/Browser

Drag **Use Application/Browser**.

Set:

- **URL:** <https://practicetestautomation.com/practice-test-login/>

Step 3: Enter Username

Inside **Use Application/Browser**, add **Type Into**.

Set:

- **Target:** Username field
- **Text:** "student"

Step 4: Enter Password

Add another **Type Into** activity.

Set:

- **Target:** Password field
- **Text:** "Password123"

Step 5: Click Submit

Add **Click** activity.

Set:

- **Target:** Submit button

Step 6: Check Login Status

Add **Check App State**.

Set:

- **Target:** Logged In Successfully
- **Wait for:** Element to appear
- **Timeout:** 5 seconds

Step 7: Target Appears

Inside **Target appears**, add **Message Box**.

Set:

Roll no: TDDS006B

Name: Shruti Sushant Prajapati

- **Text:** "Login Successful"

Step 8: Target Does Not Appear

Inside **Target does not appear**, add **Message Box**.

Set:

- **Text:** "Login Failed"

Practical no 3

Aim: Extract data from websites using Data Scraping

Step: -

Step 1: Add Use Application/Browser

Drag **Use Application/Browser**.

Set:

- **URL:** <https://www.amazon.in/>

Step 2: Enter Product Name

Inside **Use Application/Browser**, add **Type Into**.

Set:

- **Target:** Search box
- **Text:** "laptop"

Step 3: Click Search

Add **Click** activity.

Set:

- **Target:** Go/Search button

Step 4: Add Use Application/Browser for Results

Add another **Use Application/Browser**.

Set:

- **URL:** Amazon laptop search results page

Step 5: Extract Table Data

Inside the second **Use Application/Browser**, add **Extract Table Data**.

Set:

- **Target:** Product results
- Select the required product details to extract.
- Store the extracted data in a **DataTable variable**, for example: laptop

Step 6: Add Write CSV

Add **Write CSV** activity.

Set:

- **Local CSV file:** Select the location where you want to save the CSV file.

Roll no: TDDS006B

Name: Shruti Sushant Prajapati

- What to write: laptop
- How to write: Write
- Include headers: Yes

Practical no 4

Aim: Automate Excel operations: sorting, filtering, and reporting

Step: -

Step 1: Read Excel Data

Add **Read Range Workbook**.

Set:

- **File:** Select the Employees Excel file
- **Sheet Name:** "Employees"
- **Output:** employeesdata

Step 2: Filter Data Table

Add **Filter Data Table**.

Set:

- **DataTable:** employeesdata
- **Filtered DataTable:** filterdata

In **Configure Filter**:

- **Keep** matching rows
- **Column:** "Department"
- **Operation:** =
- **Value:** "IT"

In **Output Columns** :

Open **Output Columns** in the Filter Wizard.

Select **Keep** and add:

- "EmployeeID"
- "Department"
- "Age"
- "Salary"

Click **OK**.

Step 4: Sort Data Table

Add **Sort Data Table**.

Set:

Roll no: TDDS006B

Name: Shruti Sushant Prajapati

- **Data Table:** filterdata
- **Column:** filterdata.Columns("Salary")
- **Order:** Descending
- **Output:** sortdata

This sorts the IT employees from **highest salary to lowest salary**.

Step 5: Write Data to Excel

Add **Write Range Workbook**.

Set:

- **File:** Select the output Excel file
- **Sheet Name:** "Sheet1"
- **Starting Cell:** Leave blank or enter "A1"
- **DataTable:** sortdata

Practical no 5

Aim: Read data from PDF invoices and generate summaries

Step: -

Step 1: Create Variables

Before adding the activities, create these variables:

Variable	Type
output	String
generate_output	String

Step 2: Read PDF Text

Add **Read PDF Text** activity.

Set:

- **File:** Select the invoice PDF
- **Output:** output

Step 3: Display PDF Text

Add **Message Box** activity.

Set:

- **Text:** output

Step 4: Generate Invoice Summary

Add **Content Generation** activity.

Set:

- **Model:** Select the required GenAI model
- **Prompt:**

"summarize the invoice " & output

- **PII Detection:** No
- **System Prompt:**

"You are a helpful assistant"

- **Output:** generate_output

Step 5: Display Summary

Add **Message Box** activity.

Set:

Roll no: TDDS006B

Name: Shruti Sushant Prajapati

- Text: generate_output

Practical no 6

Aim: Handle exceptions using Try-Catch blocks

Step:-

Step 1: Create Variables

Create these variables:

Variable Type

number1 Int32

number2 Int32

result Int32

Step 2: Assign First Number

Add **Assign** activity.

Set:

- **To:** number1
- **Value:** 10

Step 3: Assign Second Number

Add another **Assign** activity.

Set:

- **To:** number2
- **Value:** 0

Step 4: Add Try Catch

Add **Try Catch** activity.

Step 5: Add Division in Try

Inside **Try**, add **Assign**.

Set:

- **To:** result
- **Value:** number1 / number2

Since number2 = 0, this produces a **DivideByZeroException**.

Step 6: Add Catch

Add a **Catch** for:

System.DivideByZeroException

Inside **Catch**, add **Message Box**.

Set:

"error"

Step 7: Add Finally

Inside **Finally**, add **Message Box**.

Set:

"finally executed"

The Finally block executes whether an error occurs or not.

Practical no 7A

Aim: Implement conditional workflows using Switch

Step: -

Step 1: Create Variable

Create a variable:

Variable Type

result String

Step 2: Add Input Dialog

Drag **Input Dialog**.

Set:

- **Dialog Title:** "Electronics Selection"
- **Input Label:** "Enter 1, 2 or 3"
- **Input Type:** Multiple Choice
- **Input Options:** "1;2;3"
- **Value Entered:** result

Step 3: Add Switch

Add a **Switch** activity.

Set:

- **Expression:** result

Step 4: Add Case 1

Set:

- **Case:** 1

Inside Case 1, add **Message Box**.

Set:

"You selected Laptop"

Step 5: Add Case 2

Set:

- **Case:** 2

Add **Message Box**.

Set:

"You selected Mobile"

Step 6: Add Case 3

Set:

- **Case: 3**

Add **Message Box**.

Set:

"You selected Tablet"

Step 7: Add Default

Inside **Default**, add **Message Box**.

Set:

"Invalid selection"

Practical no 7B

Aim: Implement conditional workflows using If

Step : -

Step 1: Create Variables

Create these variables:

Variable Type

age_input String

age Int32

Step 2: Add Input Dialog

Drag **Input Dialog**.

Set:

- **Dialog Title:** "Voting"
- **Input Label:** "Enter age"
- **Input Type:** Text Box
- **Value Entered:** age_input

Step 3: Convert Age to Number

Add **Assign** activity.

Set:

- **To:** age
- **Value:** CInt(age_input)

Step 4: Add If Activity

Add an **If** activity.

Set the condition:

age >= 18

Step 5: Add Then Message Box

Inside **Then**, add **Message Box**.

Set:

Roll no: TDDS006B

Name: Shruti Sushant Prajapati

"You are eligible to vote."

Step 6: Add Else Message Box

Inside **Else**, add **Message Box**.

Set:

"You are not eligible to vote."

Practical no 8:**Aim: Integrate OCR for image-to-text extraction****Step 1: Create Variables**

Create these variables:

Variable	Type
image	Image
extract_text	String

Step 2: Load Image

Add **Load Image** activity.

Set:

- **File Name:** Select the image file
- **Output:** image

Step 3: Add Tesseract OCR

Add **Tesseract OCR** activity.

Set:

- **Image:** image
- **Output:** extract_text

The OCR reads the text present in the image.

Step 4: Display Extracted Text

Add **Message Box** activity.

Set:

- **Text:** extract_text
